

Final Project Instructions

1. Motivation

Sadly, it is becoming more and more difficult to find a model compression algorithm that works well under varying circumstances. Why don't we spend some time finding one?

2. What to do

Please select any of the following two tracks:

2.1. Track 1

- Select a published paper **without any public code**.
- Write up a codebase that implements the method.
- Validate that the method really works well or not

2.2. Track 2

- Select a published paper **with public code**.
- Stress-test the method, until it breaks:
 - Different model
 - Different dataset
 - Different hardware
 - Different metrics
- Analyze why it breaks

Note. The paper you choose should be a published paper in NeurIPS / ICML / ICLR, 2024 – 2026.

3. Team

You can make a team of **maximum 2 people per group**.

- If you have any trouble finding a teammate, please let me know via email: jaeho.lee@postech.ac.kr

Note. Extra points will be given to solo-players.

4. What to submit

You'll need to work on the proposal and final report.

4.1. Proposal

Write a one-page description of what you will do.

- Any format is fine, as long as you use LaTeX.
- Make sure to include:
 - The paper title
 - The names of all team members
 - Which track you are opting to
 - Why you believe this paper is meaningful or suspicious
 - DON'T: Choose a paper written by students at POSTECH—step out of your comfort zone.
- Submit it through PLMS
 - Only one member should submit.
- **Due.** Submit until **April 20th**.

4.2. Final report

- Write a final report (max: 6 pages)
 - Use the NeurIPS format—find it here:
<https://neurips.cc/Conferences/2026/CallForPapers>
- Make sure to include:
 - The paper title
 - The name of all team members
 - Which track you are opting to
 - Link to a public GitHub repo, with all your codes inside it
 - Limitations of your own work (e.g., in scope, rigor)
- **Due.** Submit it until **May 20th**
 - Submit via PLMS.

5. Final Presentations

Top-rated projects will have to give a final presentation

- No need to prepare slides (but having one helps)
- I'll let you know who'll present, by May 27th.
- You'll present in the Finals week.
